REPORT OF COMMISSIONER OF FISH AND FISHERIES

not been changed in the least since they killed George Crewe and the three other men.

A few days after we had built our camp and begun work there, last July, it happened one Sunday that one of the men was left alone in charge of the camp. As the day wore on he thought he heard a slight noise near him, and on looking up he saw, in the green surplus shed of the camp, a man standing over his rifle, and then with the rifle in the other, and bows, on the very spot where the last visitor was murdered, they told him the same story that they had told the man who had gone through the woods. He told the man there, and that they did not want white men on the McKinley River at all. The young man had no weapon about him, and was wholly at their mercy. They would undoubtedly have killed him, as they would certainly have done to him, glad or no, if they could have come to him with the proper weapon. I mention these incidents merely to show that with tarantulas, scorpions, rattlesnakes, Indians, panthers, and threats of murder our course here is not wholly over a path of roses.

United States Fish Commission,

M. J. Rall

2/3/2015
“The northern and Eastern European (Finland, Denmark, Sweden, Norway, Estonia and Poland) strains were genetically more similar to the Shasta strain … which provide support to their ancestry from rainbow trout populations in California.”

Trait Preference?
100 – 150 families
4 groups per year
2 year classes
Body weight measurements at 25g, 350 g, 1 kg
All fish in each group (4,000 per group; 16,000 per year)
Breeding value assignment by MTDFReML
### Growth Trials at NCCCWA

- **A Troutlodge**
- **B European Competitor**
- **C Growth Line**
- **D Synthetic Control**
- **E European Competitor**
